#### Abstract

The aim of the paper is to find graceful labeling for the graphs $\mathrm{nC}_{4}, \mathrm{nC}_{4}$ o $2 \mathrm{P}_{\mathrm{n}}, \mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$, its mirror image, $\mathrm{nC}_{4} \diamond 2 \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-$ 1) $\mathrm{P}_{2}$, and $\mathrm{nC}_{4} \diamond 2 \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2} \cup(\mathrm{n}-1) \mathrm{P}_{3}$.

## Keywords

Graceful graphs, edge-odd graceful labeling, and edge-odd graceful graph

## 1. INTRODUCTION AND PRELIMINARIES

A ( $p, q$ )-graph is a graceful graph if there exists an injective map f: $\mathrm{V}(\mathrm{G}) \rightarrow\{0,1,2, \ldots, \mathrm{k}\}$ so that induced map $\mathrm{f}_{+}: \mathrm{E}(\mathrm{G}) \rightarrow$ $\{1,2,3, \ldots, q\}$ defined by $f_{+}(x y) \equiv|f(x)-f(y)|$, where the vertex $x$ is incident with other vertex $y$ that $f$ and $f_{+}$make all are distinct

A ( $\mathrm{p}, \mathrm{q}$ ) connected graph is edge-odd graceful graph if there exists an injective map $f: E(G) \rightarrow\{1,3, \ldots, 2 q-1\}$ so that induced map $f_{+}: V(G) \rightarrow\{0,1,2, \ldots,(2 k-1)\}$ defined by $f_{+}(x)$ $\equiv \Sigma \mathrm{f}(\mathrm{xy})(\bmod 2 \mathrm{k})$, where the vertex x is incident with other vertex $y$ and $k=\max \{p, q\}$ makes all the edges distinct and odd.
A. Solairaju and K.Chitra [2008a, 2008b, 2009] obtained edge-odd graceful labeling of some graphs related to paths. A. Solairaju, Vimala, and Sasikala [2008a, 2008b] proved that edge-odd gracefulness of strong product of $P_{2}$ and $C_{n}$, and Cartesian product of $\mathrm{P}_{2}$ and $\mathrm{W}_{\mathrm{n}}$ are edge -odd graceful.

### 1.1 Graphs Related to Circuits of Length 4

Definition 1.1: The graph $\mathrm{nC}_{4}$ is a disconnect graph involving n copies of $\mathrm{C}_{4}$ with some arbitrary labeling of vertices as follows:

Figure-1

## 2. GRAPH OBTAINED FROM CIRCUITS MERGING WITH PATHS, THE FOLLOWING RESULT IS THEN OBTAINED

Definition 2.1: The graph $\mathrm{nC}_{4} \mathrm{o} 2 \mathrm{P}_{\mathrm{n}}$ is a connected graph obtained from the above disconnected graph together with adjacent edges $v_{i} v_{i+1}\left[i=1\right.$ to (n-1)] and adjacent edges $u_{i} u_{i+1}$ [ $\mathrm{i}=1$ to $(\mathrm{n}-1)]$ Some labeling of vertices and edges of the graph $n_{c 4} o 2 P_{n}$ is given below:

Figure 2
Theorem 2.1: The connected graph $\mathrm{nC}_{4}$ o $2 \mathrm{P}_{\mathrm{n}}$ is graceful.
Proof: The labeling of graph $\mathrm{n}_{\mathrm{c} 4} \mathrm{o} 2 \mathrm{P}_{\mathrm{n}}$ is followed in the figure (2)

Define a map f: $\mathrm{V}(\mathrm{G}) \square\{0,1,2, \ldots, \mathrm{q}\}$ by $f\left(\mathrm{v}_{1}\right)=0 ; f\left(\mathrm{u}_{1}\right)=$ $2 ; f\left(\mathrm{v}_{2}\right)=(\mathrm{q}-4) ; f\left(\mathrm{u}_{2}\right)=(\mathrm{q}-3)$
$f\left(\mathrm{v}_{\mathrm{i}}\right)=3(\mathrm{i}-1), \mathrm{i}$ is odd; $f\left(\mathrm{v}_{\mathrm{i}+2}\right)=f\left(\mathrm{v}_{2}\right)-3 \mathrm{i}, \mathrm{i}$ is even where $\mathrm{i}=$ 3 to n
$f\left(\mathrm{u}_{\mathrm{i}}\right)=f\left(\mathrm{u}_{1}\right)+3(\mathrm{i}-1), \mathrm{i}$ is odd; $f\left(\mathrm{u}_{\mathrm{i}+2}\right)=f\left(\mathrm{u}_{2}\right)-3 \mathrm{i}, \mathrm{i}$ is even; where $\mathrm{i}=3$ to n .

$$
\begin{aligned}
& f\left(\mathrm{t}_{1}\right)=\mathrm{q} ; f\left(\mathrm{~s}_{1}\right)=(\mathrm{q}-1) ; f\left(\mathrm{t}_{2}\right)=3 ; f\left(\mathrm{~s}_{2}\right)=5 ; \\
& f(\mathrm{ti})=\mathrm{f}\left(\mathrm{t}_{1}\right)-3(\mathrm{i}-1) ; f\left(\mathrm{~s}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{~s}_{1}\right)-3(\mathrm{i}-1), \mathrm{i} \text { is odd; }
\end{aligned}
$$

where i varies 3 to n
$f\left(\mathrm{t}_{\mathrm{i}+2}\right)=f\left(\mathrm{t}_{2}\right)+3 \mathrm{i} ; f\left(\mathrm{~s}_{\mathrm{i}+2}\right)=f\left(\mathrm{~s}_{2}\right)+3 \mathrm{i}, \mathrm{i}$ is even; where I varies 3 to n .
Define $\mathrm{f}+: \mathrm{E}(\mathrm{G}) \rightarrow\{1,2, \ldots, \mathrm{q}\}$ by $f(\mathrm{uv})=|f(\mathrm{u})-f(\mathrm{v})|$ for all $\mathrm{u}, \mathrm{v} \in \mathrm{V}(\mathrm{G})$. The maps $f$ and $f+$ satisfy the conditions of graceful labeling for $\mathrm{nC}_{4}$

## 3. THE GRACEFULNESS OF THE GRAPH NP2 $\diamond$ P2N

Definition 3.1: The graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$ is defined as a connect graph involving $n$ copies of $P_{2}$ and a copy of $P_{2 n}$ as follows:

Theorem 3.1: The graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$ is defined as a connect graph involving $n$ copies of $P_{2}$ and a copy of $P_{2 n}$ with some arbitrary labeling of vertices as follows in figure $3\left(\mathrm{nC}_{4} \mathrm{O}\right.$ $2 \mathrm{P}_{\mathrm{n}}$ ). Thus the graph $\mathrm{nC}_{4}$ o $2 \mathrm{P}_{\mathrm{n}}$ is graceful

Example 1: The graphs $6 \mathrm{C}_{4}$ o $2 \mathrm{P}_{6}$ and $7 \mathrm{C}_{4}$ o $2 \mathrm{P}_{7}$ are graceful.

Figure 3

$f\left(\mathrm{~V}_{\mathrm{i}}\right)=\mathrm{q}-(\mathrm{i}-1)$; if i is odd; $f\left(\mathrm{~V}_{\mathrm{i}}\right)=(\mathrm{i}-1)$; if i is even; i varies from 1 to 2 n

$$
f\left(\mathrm{u}_{\mathrm{i}}\right)=(\mathrm{i}-1) ; \text { if } \mathrm{i} \text { is odd; } f\left(\mathrm{u}_{\mathrm{i}}\right)=(\mathrm{q}-1)-(\mathrm{i}-2) ; \text { if } \mathrm{i} \text { is }
$$

even; i varies from 1 to $n$
Define $\left.\mathrm{f}_{+}:{\mathrm{E}\left(\mathrm{nP}_{2}\right.} \diamond \mathrm{P}_{2 \mathrm{n}}\right) \square\{1,2, \ldots, \mathrm{q}\}$ by $f(\mathrm{uv})=\square f(\mathrm{u})-$ $f(\mathbf{v}) \square$ for all $\mathrm{u}, \mathrm{v} \square \mathrm{V}(\mathrm{G})$

The maps $f$ and $f_{+}$satisfy the conditions of graceful labeling for the graph $\mathrm{nC}_{4}$ o $2 \mathrm{P}_{\mathrm{n}}$. Thus the graph $\left(\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}\right)$ is graceful.
Example 2: The graphs $6 \mathrm{P}_{2} \diamond \mathrm{P}_{12}$ and $6 \mathrm{P}_{2} \diamond \mathrm{P}_{12}$ are graceful.

## 4. THE GRACEFULNESS OF THE MIRROR IMAGE OF THE GRAPH NP2 $\diamond$ P2N

Definition: 4.1: The mirror image of the graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$ is defined as a connect graph involving twice times of $n$ copies of $\mathrm{P}_{2}$ and a copy of $\mathrm{P}_{2 \mathrm{n}}$ as follows:

Theorem 4.1: The mirror image of the graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$ is graceful graph.
Proof: The mirror image of the graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$ is defined as a connect graph involving twice times of $n$ copies of $P_{2}$ and a copy of $\mathrm{P}_{2 \mathrm{n}}$ with some arbitrary labeling of vertices as follows in figure 4:

Figure 4

Define $\left.f: \mathrm{V}_{\left(\mathrm{nP}_{2}\right.} \diamond \mathrm{P}_{2 \mathrm{n}}\right) \longrightarrow\{0,1,2, \ldots, \mathrm{q}\}$ by
$\left.f\left(\mathrm{~V}_{\mathrm{i}}\right)=\mathrm{q}-3[(\mathrm{i}-1) / 2)\right], \mathrm{i}$ is odd; $f\left(\mathrm{~V}_{\mathrm{i}}\right)=2+3[(\mathrm{i}-1) / 2] ; \mathrm{i}$ is even;
where i varies from 1 to 2 n ;
$\left.f\left(\mathrm{u}_{\mathrm{i}}\right)=3[(\mathrm{i}-1) / 2)\right]$, i is odd; $\left.f\left(\mathrm{u}_{\mathrm{i}}\right)=(\mathrm{q}-1)-3[(\mathrm{i}-1) / 2)\right], \mathrm{i}$ is even
where i varies from 1 to $n$;
$f\left(\mathrm{t}_{\mathrm{i}}\right)=1+3[(\mathrm{i}-1) / 2], \mathrm{i}$ is odd; $\left.f\left(\mathrm{t}_{\mathrm{i}}\right)=(\mathrm{q}-2)-3[(\mathrm{i}-1) / 2)\right], \mathrm{i}$ is even;
where i varies from 1 to n ;
 $f(\mathbf{v}) \square$ for all $\mathrm{u}, \mathrm{v} \square \mathrm{V}(\mathrm{G})$

The maps $f$ and $f_{+}$satisfy the conditions of graceful labeling for the graph $\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}$. Thus the graph $\left(\mathrm{nP}_{2} \diamond \mathrm{P}_{2 \mathrm{n}}\right)$ is graceful

Example 3: The mirror images of the graphs $5 \mathrm{P}_{2} \diamond \mathrm{P}_{10}$ and $6 \mathrm{P}_{2} \diamond \mathrm{P}_{12}$ are graceful.

## 5. GRACEFULNESS OF NC4 $\diamond$ P2N $\cup$ (N-1)P2

Definition 5.1: The graph $\mathrm{nC}_{4} \diamond \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2}$ is defined as a connected graph mentioned below in figure 5 .

Figure 5
Theorem 5.1: The graph $\mathrm{nC}_{4} \diamond \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2}$ is graceful.
Proof: The arbitrary labeling of the given graph $\mathrm{nC}_{4} \diamond \mathrm{P}_{2 \mathrm{n}}$ $\cup(\mathrm{n}-1) \mathrm{P}_{2}$ is mentio9ned the above figure 5

Define f: $V(G) \rightarrow\{0,1,2, \ldots \ldots . . \mathrm{q}\}$ by
$f\left(v_{i}\right)=\frac{7(i-1)}{2}, i$ is odd; $f\left(v_{i}\right)=(q+3)-\frac{7 i}{2} ; i$ is even;
$f\left(u_{i}\right)=f\left(v_{i}\right)+1, i$ is odd; $f\left(u_{i}\right)=f\left(v_{i}\right)-1, i$ is even;
$\mathrm{f}\left(\mathrm{s}_{\mathrm{i}}\right)=\mathrm{q}-\frac{7(i-1)}{2}, \mathrm{i}$ is odd; $\mathrm{f}\left(\mathrm{s}_{\mathrm{i}}\right)=\frac{7 i}{2}-4, \mathrm{i}$ is even;
$\left.f\left(t_{i}\right)=\right)=f\left(s_{i}\right)-2$, $i$ is odd; $\left.f\left(t_{i}\right)\right)=f\left(s_{i}\right)+2$, $i$ is even; where $i$ varies from 1 to $n$

Example 4: The connected graphs $6 \mathrm{C}_{4} \diamond \mathrm{P}_{12} \cup 5 \mathrm{P}_{2}$ and $7 \mathrm{C}_{4} \diamond \mathrm{P}_{14} \cup 6 \mathrm{P}_{2}$ are graceful.

## 6. GRACEFULNESS OF GRAPH NC4 $\diamond$ 2P2N $\cup(\mathbf{N}-1) \mathbf{P 2} \cup(\mathbf{N}-1) \mathbf{P 3}$

Definition 6.1: The graph $\mathrm{nC}_{4} \diamond 2 \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2} \cup(\mathrm{n}-1) \mathrm{P}_{3}$ is defined as in following figure 6 :

Figure 6
Theorem 6.1: The connected graph $\mathrm{nC}_{4} \diamond 2 \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2}$ $\cup(\mathrm{n}-1) \mathrm{P}_{3}$ is graceful.
Proof: The arbitrary labelings of vertices of the graph $\mathrm{nC}_{4} \diamond$ $2 \mathrm{P}_{2 \mathrm{n}} \cup(\mathrm{n}-1) \mathrm{P}_{2} \cup(\mathrm{n}-1) \mathrm{P}_{3}$ are mentioned above in the figure 6 :

Define $f: V(G) \rightarrow\{0,1,2, \ldots, q\}$ by
$\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=5(\mathrm{i}-1) ; \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)+1 ; \mathrm{f}\left(\mathrm{s}_{\mathrm{i}}\right)=(\mathrm{q}+3)-7 \mathrm{i} ;$
$\mathrm{f}\left(\mathrm{t}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{s}_{\mathrm{i}}\right)-1 ; \mathrm{f}\left(\mathrm{x}_{\mathrm{i}}\right)=(\mathrm{q}+7)-7 \mathrm{i} ; \mathrm{f}\left(\mathrm{y}_{\mathrm{i}}\right)=\mathrm{f}\left(\mathrm{x}_{\mathrm{i}}\right)-2 ; \mathrm{f}\left(\mathrm{z}_{\mathrm{i}}\right)=5 \mathrm{i}-2 ; \mathrm{i}$ varies from 1 to n

Example 5: The connected graphs $6 \mathrm{C}_{4} \diamond 2 \mathrm{P}_{12} \cup 5 \mathrm{P}_{2} \cup 5 \mathrm{P}_{3}$ and $7 \mathrm{C}_{4} \diamond 2 \mathrm{P}_{14} \cup 6 \mathrm{P}_{2} \cup 6 \mathrm{P}_{3}$ are graceful.
