#### Abstract

Let $G(V, E)$ be a graph with $p$ vertices and $q$ edges.A graph $\mathrm{G}(\mathrm{p}, \mathrm{q})$ is said to be a Beta combination graph if there exist a bijection $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2 \ldots, \mathrm{p}\}$ such that the induced function $B_{f}: E(G) \rightarrow N, N$ is a natural number, given by $B_{f}$ $(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, every edges $u v \in G$ and are all distinct and the function $f$ is called the Beta combination labeling of $G$ [8].In this paper, we prove quadrilateral snake $\mathrm{Q}_{\mathrm{n}}$, double triangular snake, alternate triangular snake $\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)$, alternate quadrilateral snake $A\left(Q_{n}\right)$, helm $H_{n}$, the gear graph,Comb $P_{n} O K_{1}$,the graph $C_{n} \odot K_{1}$ and the diamond graph are the Beta combination graphs.

## General Terms

Mathematical subject classification (2010) 05C78.

## Keywords

Beta combination graph and Beta combination labeling.

## 1. INTRODUCTION

Graph labeling ,where the vertices and edges are assigned real values or subsets of a set are subject to certain conditions.Throughout this paper, by a graph we mean a finite, undirected, simple graph. The vertex set and the edge set of a graph G are denoted by $\mathrm{V}(\mathrm{G})$ and $\mathrm{E}(\mathrm{G})$ respectively. Let $G(p, q)$ be a graph with $p=|V(G)|$ vertices and $q=|E(G)|$ edges. A detailed survey of graph labeling can be found in [6].Combinations play a major role in combinatorial problems. The concept of beta combination labeling of graphs was introduced in [8] which is a logical-mathematical attempt. We use the following definitions in the subsequent sections.
Definition 1.1. [8]
A graph $\mathrm{G}(\mathrm{p}, \mathrm{q})$ is said to be a Beta combination graph if there exist a bijection $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2 \ldots, \mathrm{p}\}$ such that the induced function $\mathrm{Bf}: \mathrm{E}(\mathrm{G}) \rightarrow \mathrm{N}, \mathrm{N}$ is a natural number, given by Bf

$$
[f(u)+f(v)]!
$$

(uv) $=f(u)!f(v)!$, every edges $u v \in G$ and are all distinct and the function f is called the Beta combination labeling.

## Definition 1.2.[5]

A quadrilateral snake is obtained from a path $u 1, \mathrm{u} 2, \ldots, \mathrm{un}$ by joining ui,ui+1 to new vertices vi, wi .That is ,every edge of the path is replaced by the cycle.

## Definition 1.3.[5]

A triangular snake is obtained from a path $\mathrm{v} 1, \mathrm{v} 2, \ldots, \mathrm{vn}$ by joining vi and vi+1 to a new vertex wi for $\mathrm{i}=1,2, \ldots, \mathrm{n}-1$.

## Definition 1.4.[5]

A double triangular snake consists of two triangular snakes that have a common path.That is, a double triangular snake is obtained from a path $u_{1}, u_{2}, \ldots, u_{n}$ by joining $u_{i}$ and $u_{i+1}$ to new vertex $v_{i}$ for $i=1,2, \ldots, n-1$ and to a new vertex $w_{i}$ for $\mathrm{i}=1,2, \ldots, \mathrm{n}-1$.

## Definition 1.5.[7]

An alternate triangular snake $\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)$ is obtained from a path $u_{1}, u_{2}, \ldots, u_{n}$ by joining $u_{i}$ and $u_{i+1}$ (alternatively) to new vertex $\mathrm{v}_{\mathrm{i}}$. That is every alternative edge of a path is replaced by a cycle $\mathrm{C}_{3}$.

## Definition 1.6.[7]

An alternate quadrilateral snake $A\left(Q_{n}\right)$ is obtained from a path $u_{1}, u_{2}, \ldots, u_{n}$ by joining $u_{i}$ and $u_{i+1}$ (alternatively) to new vertex $v_{i}, w_{i}$ respectively and then joining $v_{i}$ and $w_{i}$. That is every alternative edge of a path is replaced by a cycle $\mathrm{C}_{4}$.
Definition 1.7.[5]
The wheel $\mathrm{W}_{\mathrm{n}}(\mathrm{n} \geq 3)$ is obtained by joining all nodes of cycle $\mathrm{C}_{\mathrm{n}}$ to a further node called the center, and contains ( $\mathrm{n}+1$ ) nodes and 2 n edges.
Definition 1.8 .[5]
The helm $\mathrm{H}_{\mathrm{n}}$ is the graph obtained from a wheel by attachaing a pendent edge at each vertex of the $n$-cycle.

## Definition 1.9 .[5]

A gear graph is obtained from the wheel $\mathrm{W}_{\mathrm{n}}$ by adding a vertex between every pair of adjacent vertices of the n-cycle.

## Definition 1.10.[5]

The corona $G_{1} \Theta_{2}$ of two graphs $G_{1}$ and $G_{2}$ is defined as the graph $G$ obtained by taking one copy of $G_{1}$ (which has $p$ points)and $p$ copies of $G_{2}$ and then joining the $i^{\text {th }}$ point of $G_{1}$ to every point in the $\mathrm{i}^{\text {th }}$ copy of $\mathrm{G}_{2}$.
In this paper, we prove quadrilateral snake $\mathrm{Q}_{\mathrm{n}}$, double triangular snake, alternate triangular snake $\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)$, alternate quadrilateral snake $A\left(Q_{n}\right)$, helm $H_{n}$,the gear graph,Comb $P_{n} \odot K_{1}$,the graph $C_{n} \odot K_{1}$ and the diamond graph are the Beta combination graphs.

## 2. MAIN RESULTS

Theorem: 2.1 The quadrilateral snake $\mathrm{Q}_{\mathrm{n}}$ is a beta combination graph.
Proof: Let Qn be the quadrilateral snake with $3 n-2$ vertices
u1, u2, ...,un ,v1,v2,..,vn-1, w1,w2, ...,wn-1.Let u1, u2, .., un be the vertices of the path Pn and every ui and ui+1 are joined to new vertices vi and wi respectively and every vi and wi are joined by an edge vi wi for $1 \leq \mathrm{i} \leq \mathrm{n}-1$.
Then $E\left(Q_{n}\right)=\left\{u_{i} u_{i+1} ; u_{i} v_{i} ; u_{i+1} w_{i} ; v_{i} w_{i}\right.$ if $\left.1 \leq i \leq n-1\right\}$ and $\left|\mathrm{E}\left(\mathrm{Q}_{\mathrm{n}}\right)\right|=4 \mathrm{n}$-4.Define a bijection $\mathrm{f}: \mathrm{V}\left(\mathrm{Q}_{\mathrm{n}}\right) \rightarrow\{1,2, \ldots, 3 \mathrm{n}-2\}$ by $\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=3 \mathrm{i}-2$ if $1 \leq \mathrm{i} \leq \mathrm{n}$ and $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=3 \mathrm{i}-1$ if $1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{i}}\right)=3 \mathrm{i}$ if $1 \leq \mathrm{i} \leq \mathrm{n}-1$. And f induces $\mathrm{B}_{\mathrm{f}}: \mathrm{E}\left(\mathrm{Q}_{\mathrm{n}}\right) \rightarrow \mathrm{N}$ by
$B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every edges $u v$ of $Q_{n}$ and are all distinct.

Theorem: 2.2 Every double triangular snake is a beta combination graph.
Proof: Let G be a double triangular snake with $3 \mathrm{n}-2$ vertices $\left\{\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1}, \mathrm{v}_{2}, . ., \mathrm{v}_{\mathrm{n}-1}, \mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{\mathrm{n}-1}\right\}$.
$E(G)=\left\{u_{i} u_{i+1} ; u_{i} v_{i} ; u_{i} w_{i} ; u_{i+1} v_{i} ; u_{i+1} w_{i}\right.$ if $\left.1 \leq i \leq n-1\right\}$ and $|\mathrm{E}(\mathrm{G})|=5 n-5$. Define $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2, \ldots, 3 \mathrm{n}-2\}$ by
$\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=2 \mathrm{n}-2+\mathrm{i}$ if $1 \leq \mathrm{i} \leq \mathrm{n}$ and $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=2 \mathrm{i}-1$ if $1 \leq \mathrm{i} \leq \mathrm{n}-1$;
$\mathrm{f}\left(\mathrm{w}_{\mathrm{i}}\right)=2 \mathrm{i}$ if $1 \leq \mathrm{i} \leq \mathrm{n}-1$.And f induces that $\mathrm{B}_{\mathrm{f}}: \mathrm{E}(\mathrm{G}) \rightarrow \mathrm{N}$ by
$B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every edges uv of $G$ and are all distinct.

Example:2.3The beta combination labeling of a double triangular snake is shown in the Fig-1.

Fig-1.
Theorem: 2.4 Every alternate triangular snake $\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)$ is a beta combination graph.

## Proof:

Case (i) If the triangle starts from $u_{1}$.

In this case $\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)$ has (3n/2) ( n is even ) vertices $\left\{\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n} / 2}\right\}$ such that $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $P_{n}$ and every $u_{2 i-1}$ and $u_{2 i}$ are adjacent to $v_{i}$ for $1 \leq i \leq(n / 2)$.
$\mathrm{E}\left(\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)\right)=\left\{\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right.$ if $1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \mathrm{u}_{2 \mathrm{i}-1} \mathrm{v}_{\mathrm{i}} ; \mathrm{v}_{\mathrm{i}} \mathrm{u}_{2 \mathrm{i}}$ if $\left.1 \leq \mathrm{i} \leq(\mathrm{n} / 2)\right\}$
and $\left|E\left(A\left(T_{n}\right)\right)\right|=2 n-1$. Define $f: V\left(A\left(T_{n}\right)\right) \rightarrow\{1,2, \ldots,(3 n / 2)\}$ by $\mathrm{f}\left(\mathrm{u}_{2 \mathrm{i}-1}\right)=3 \mathrm{i}-2$ if $1 \leq \mathrm{i} \leq(\mathrm{n} / 2)$; $\mathrm{f}\left(\mathrm{u}_{2 \mathrm{i}}\right)=3 \mathrm{i}$ if $1 \leq \mathrm{i} \leq(\mathrm{n} / 2)$ and
$f\left(v_{i}\right)=3 i-1$ if $1 \leq i \leq(n / 2)$.
Case (ii) If the triangle starts from $\mathrm{u}_{2}$.

In this case $A\left(T_{n}\right)$ has (3n-2)/2 ( $n$ is even ) vertices $\left\{\mathrm{u}_{1}, \mathbf{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{((\mathrm{n}-2) / 2}\right\}$ such that $\mathrm{u}_{1}, \mathbf{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of path $P_{n}$ and every $u_{2 i}$ and $u_{2 i+1}$ are adjacent to $v_{i}$ for $1 \leq \mathrm{i} \leq(\mathrm{n}-2) / 2$.
$E\left(A\left(T_{n}\right)\right)=\left\{u_{i} u_{i+1}\right.$ if $1 \leq i \leq n-1 ; u_{2 i} v_{i} ; v_{i} u_{2 i+1}$ if $\left.1 \leq i \leq(n-2) / 2\right\}$.
and $\left|E\left(A\left(T_{n}\right)\right)\right|=2 n-3$. Define $\mathrm{f}: \mathrm{V}\left(\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)\right) \rightarrow\{1,2, \ldots,(3 \mathrm{n}-2) / 2\}$ by $f\left(u_{2 i-1}\right)=3 i-2$ if $1 \leq i \leq(n / 2) ; f\left(u_{2 i}\right)=3 i-1 \quad$ if $1 \leq i \leq(n / 2)$ and $f\left(v_{i}\right)=3 \mathrm{i}$ if $1 \leq \mathrm{i} \leq(\mathrm{n}-2) / 2$.

In the above two cases, f induces $\mathrm{B}_{\mathrm{f}}: \mathrm{E}\left(\mathrm{A}\left(\mathrm{T}_{\mathrm{n}}\right)\right) \rightarrow \mathrm{N}$ by
$B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every edges uv of $A\left(T_{n}\right)$ and are all distinct.

Theorem: 2.5 Every alternate quadrilateral snake $\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)$ is a beta combination graph.
Proof: Case (i) If the quadrilateral starts from $u_{1}$.
In this case $A\left(Q_{n}\right)$ has $2 n$ vertices $\left\{u_{1}, u_{2}, \ldots, u_{n}, v_{1}, v_{2}, \ldots, v_{n / 2}\right.$, $\left.\mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{\mathrm{n} / 2}\right\}$ such that $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of $\mathrm{P}_{\mathrm{n}}$ and $u_{2 i-1}$ is adjacent to $v_{i}$ and $u_{2 i}$ is adjacent to $w_{i}$ and $v_{i}$ is adjacent to $\mathrm{w}_{\mathrm{i}}$ for $1 \leq \mathrm{i} \leq(\mathrm{n} / 2)$.
$\mathrm{E}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right)=\left\{\begin{array}{l}u_{i} u_{i+1} \text { if } 1 \leq i \leq n-1 \\ u_{2 i-1} v_{i} ; u_{2 i} w_{i} ; v_{i} w_{i} \text { if } 1 \leq i \leq \frac{n}{2}\end{array}\right.$
and $\left|\mathrm{E}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right)\right|=(5 \mathrm{n}-2) / 2$. Define $\mathrm{f}: \mathrm{V}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right) \rightarrow\{1,2, \ldots, 2 \mathrm{n}\}$ by $f\left(u_{2 i-1}\right)=4 \mathrm{i}-3$ if $1 \leq \mathrm{i} \leq(\mathrm{n} / 2) ; \mathrm{f}\left(\mathrm{u}_{2 \mathrm{i}}\right)=4 \mathrm{i}$ if $1 \leq \mathrm{i} \leq(\mathrm{n} / 2)$;
$f\left(v_{i}\right)=4 i-2$ if $1 \leq i \leq(n / 2)$ and $f\left(w_{i}\right)=4 i-1$ if $1 \leq i \leq(n / 2)$.
Case (ii) If the quadrilateral starts from $\mathrm{u}_{2}$. In this case $\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)$ has $2 n-2$ vertices $\left\{\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{(\mathrm{n}-2) / 2}, \mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{(\mathrm{n}-}\right.$ $\left.{ }_{2) / 2}\right\}$ such that $u_{1}, u_{2}, \ldots, u_{n}$ be the vertices of path $P_{n}$ and every $u_{2 i}$ is adjacent to $v_{i}$ and $u_{2 i+1}$ is adjacent to $w_{i}$ and $v_{i}$ is adjacent to $\mathrm{w}_{\mathrm{i}}$ for $1 \leq \mathrm{i} \leq(\mathrm{n}-2) / 2$.
$\mathrm{E}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right)=\left\{\begin{array}{l}u_{i} u_{i+1} \text { if } 1 \leq i \leq n-1 \\ u_{2 i} v_{i} ; u_{2 i+1} w_{i} ; v_{i} w_{i} \text { if } 1 \leq i \leq\left(\frac{n-2}{2}\right)\end{array}\right.$
and $\left|\mathrm{E}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right)\right|=(5 \mathrm{n}-8) / 2$. Define $\mathrm{f}: \mathrm{V}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right) \rightarrow\{1,2, \ldots, 2 \mathrm{n}-2\}$ by $f\left(u_{2 i-1}\right)=4 i-3$ if $1 \leq i \leq(n / 2) ; f\left(u_{2 i}\right)=4 i-2$ if $1 \leq i \leq(n / 2)$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=4 \mathrm{i}-1$ if $1 \leq \mathrm{i} \leq(\mathrm{n}-2) / 2$ and $\mathrm{f}\left(\mathrm{w}_{\mathrm{i}}\right)=4 \mathrm{i}$ if $1 \leq \mathrm{i} \leq(\mathrm{n}-2) / 2$.

In the above two cases, f induces $\mathrm{B}_{\mathrm{f}}: \mathrm{E}\left(\mathrm{A}\left(\mathrm{Q}_{\mathrm{n}}\right)\right) \rightarrow \mathrm{N}$ by
$B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every edges uv of $A\left(Q_{n}\right)$ and are all distinct.

Example:2.6 The beta combination labeling of alternate quadrilateral snake $A\left(Q_{4}\right)$ is shown in the Fig-2.

Fig-2.
Theorem: 2.7 Every helm $H_{n}$ is a beta combination graph. Proof: Let $\mathrm{H}_{\mathrm{n}}$ be the helm graph with $2 \mathrm{n}+1$ vertices $\mathrm{u}_{1}, \mathrm{u}_{2}$, $\ldots, \mathrm{u}_{\mathrm{n}}, \mathrm{u}_{\mathrm{n}+1}, \mathrm{v}_{1}, \mathrm{v}_{2}, \ldots ., \mathrm{v}_{\mathrm{n}}$ such that $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of cycle $C_{n}$ and $u_{i+1}$ be the center vertex and every vertex $v_{i}$ is adjacent to $u_{i}$ through $n$ pendent edges for $1 \leq i \leq n$.
Let $\left\{u_{i} u_{i+1}\right.$ if $1 \leq i \leq n-1 ; u_{1} u_{n} ; u_{i} u_{n+1}$ if $\left.1 \leq i \leq n ; u_{i} v_{i}\right\}$ be the $3 n$ edges of $H_{n}$. Define $f: V\left(H_{n}\right) \rightarrow\{1,2, \ldots, 2 n+1\}$ by
$\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{n}+\mathrm{i}$ if $1 \leq \mathrm{i} \leq \mathrm{n}+1$ and $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}$ if $1 \leq \mathrm{i} \leq \mathrm{n}$. And f induces that $B_{f}: E\left(H_{n}\right) \rightarrow N$ by $B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every edges uv of $\mathrm{H}_{\mathrm{n}}$ and are all distinct.

Theorem:2.8 Every gear graph admits a beta combination labeling.
Proof: Let $G$ be a gear graph with $2 n+1$ vertices $u_{1}, u_{2}, \ldots, u_{n}$ $, \mathrm{u}_{\mathrm{n}+1}, \mathrm{v}_{1}, \mathrm{v}_{2}, . ., \mathrm{v}_{\mathrm{n}}$ such that $\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n}}$ be the vertices of cycle $C_{n}$ and every $v_{i}$ between every pair of adjacent vertices of $C_{n}$ for $1 \leq \mathrm{i} \leq \mathrm{n}$. $\mathrm{E}(\mathrm{G})=\left\{\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{n}+1}\right.$ if $1 \leq \mathrm{i} \leq \mathrm{n} ; \mathrm{u}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}}$ if $1 \leq \mathrm{i} \leq \mathrm{n}$; $\mathrm{v}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}$ if $\left.1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \mathrm{v}_{\mathrm{n}} \mathrm{u}_{1}\right\}$ and $|\mathrm{E}(\mathrm{G})|=3 \mathrm{n}$. Define a bijection $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2, \ldots, 2 \mathrm{n}\}$ by $\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=2 \mathrm{i}-1$ if $1 \leq \mathrm{i} \leq \mathrm{n}$ and $\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=2 \mathrm{n}+1 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=2 \mathrm{n}-2(\mathrm{i}-1)$ if $1 \leq \mathrm{i} \leq \mathrm{n}$. And f induces that
$B_{f}: E(G) \rightarrow N$ by $B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every
edges uv of $G$ and are all distinct.
Example:2.9 The beta combination labeling of helm $\mathrm{H}_{5}$ is shown in the Fig-3.

Fig-3.
Theorem:2.10 The Comb $P_{n} \odot K_{1}$ admits a beta combination labeling.
Proof: Let $u_{1}, u_{2}, \ldots, u_{n}$ be the vertices of Path $P_{n}$ and $v_{i}$ be the vertex of $i^{\text {th }}$ copy of the complete graph $K_{1}$ for $1 \leq i \leq n$.
Therefore Comb $\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}$ has 2 n vertices.
Then $E\left(P_{n} \odot K_{1}\right)=\left\{u_{i} u_{i+1}\right.$ if $1 \leq i \leq n-1 ; u_{i} v_{i}$ if $\left.1 \leq i \leq n\right\}$ and $\left|E\left(P_{n} \odot K_{1}\right)\right|=2 n-1$. Define $\mathrm{f}: V\left(\mathrm{P}_{\mathrm{n}} \odot K_{1}\right) \rightarrow\{1,2, \ldots, 2 \mathrm{n}\}$ by $f\left(u_{i}\right)=2 i-1$ and $f\left(v_{i}\right)=2 i$ if $1 \leq i \leq n$. And $f$ induces that
$B_{f}: E\left(P_{n} \odot K_{1}\right) \rightarrow N$ by $B_{f}(u v)=\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$, for every
edges uv of $\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}$ and are all distinct.

Example: 2.11 The beta combination labeling of Comb $\mathrm{P}_{5} \odot \mathrm{~K}_{1}$ is shown in the Fig-4.

## Fig-4

Theorem :2.1 The graph $C_{n} \odot K_{1}$ is a beta combination graph. Proof: Let $u_{1}, u_{2}, \ldots \ldots, u_{n}$ be the $n$ vertices of $C_{n}$ and $v_{i}$ be the vertex of $i^{\text {th }}$ copy of the complete graph $\mathrm{K}_{1}$ for $1 \leq$
$\mathrm{i} \leq$ n. Therefore $\mathrm{C}_{\mathrm{n}} \odot K_{1}$ has 2 n vertices. $\mathrm{E}\left(\mathrm{C}_{\mathrm{n}} \odot K_{1}\right)=\left\{\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right.$ if 1 $\leq \mathrm{i} \leq \mathrm{n}-1 ; \mathrm{u}_{1} \mathrm{u}_{\mathrm{n}} ; \mathrm{u}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}}$ if $\left.1 \leq \mathrm{i} \leq \mathrm{n}\right\}$ and $\left|\mathrm{E}\left(\mathrm{C}_{\mathrm{n}} \odot K_{1}\right)\right|=2 \mathrm{n}$.
Define a bijection $f: V\left(C_{n} \odot K_{1}\right) \rightarrow\{1,2, \ldots, 2 n\}$ by $f\left(u_{i}\right)=n+i$ if $1 \leq i \leq n$ and $f\left(v_{i}\right)=i$ if $1 \leq i \leq n$. And $f$ induces that $B_{f}$ :
$\mathrm{E}\left(\mathrm{C}_{\mathrm{n}} \odot K_{1}\right) \rightarrow \mathrm{N}$ by $\mathrm{B}_{\mathrm{f}}(\mathrm{uv})=\frac{[\mathrm{f}(\mathrm{u})+\mathrm{f}(\mathrm{v})]!}{\mathrm{f}(\mathrm{u})!\mathrm{f}(\mathrm{v})!}$, for every
edges uv of $C_{n} \odot K_{1}$ and are all distinct.
Example:2.13 The beta combination labeling of $\mathrm{C}_{8} \mathrm{OK}_{1}$ is shown in the Fig-5.

## Fig-5.

Theorem :2.14 Every diamond graph is a Beta Combination graph.
Proof: Let $G$ be a diamond graph with 4 vertices $u_{1}, u_{2}$, $\mathrm{u}_{3}, \mathrm{u}_{4} . \mathrm{E}(\mathrm{G})=\left\{\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right.$ if $\left.1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \mathrm{u}_{1} \mathrm{u}_{4} ; \mathrm{u}_{2} \mathrm{u}_{4}\right\}$ and $|\mathrm{E}(\mathrm{G})|=$ 5. Define $f: V(G) \rightarrow\{1,2,3,4\}$ is defined by $f\left(u_{i}\right)=i$, if $1 \leq$ $\mathrm{i} \leq 4$. And f induces that $\mathrm{B}_{\mathrm{f}}: \mathrm{E}(\mathrm{G}) \rightarrow \mathrm{N}$ by $\mathrm{B}_{\mathrm{f}}(\mathrm{uv})=$ $\frac{[f(u)+f(v)]!}{f(u)!f(v)!}$ for every edges $u v$ in $G$ and are all distinct.

## 3. CONCLUSION

We have planned to find applications of beta combination graphs.
